Math 455—Spring 2020
Project Questionnaire

Submit your answers to these questions by email to me with the subject line “455 Project Questions” by Tuesday, March 31.

You will need to refer to the list of possible project topics posted on the course web page and the Moodle page.

1. What is your name? (Sometimes that’s hard to determine from the email address...)

2. What is your major? (Include double/triple majors. If one of your majors is math, list which concentration you are doing.)

3. What other upper-division (numbered above 300) math courses have you taken? List two or three of your favorite topics from those courses. Also list two or three of your least favorite topics.

4. What topic have you enjoyed the most so far in Math 455?

5. What topic have you enjoyed the least so far in Math 455?

6. List any particular areas of application of mathematics that you’re interested in.

7. Do you have any programming experience? If so, how much and what kinds?

8. Are there any other people in the class you would particularly like to work with? (Note: I don’t promise to honor such requests. If A asks to work with B but not vice versa, I will ignore it, and even when the request is mutual it may conflict with other constraints on the size and composition of the groups.)

9. List, in order, your top three choices from the list of suggested project topics I have put on the course web site. (I don’t expect you to know what all those things are. Part of this homework assignment is to spend some time with Google and Wikipedia, etc., to get at least a little idea of what these topics are like.) If you have an idea for a topic I didn’t list, tell me about that (but after you list your top three from the list).

10. Tell me anything else you think I should know about assigning you to a team.
